

# Stranded

You are to follow the instructions below to get the basics for a short story you and your group members will write from different points of view. Be creative and try to use some of the *knowledge of chemistry* to help you resolve some problem encountered in the story.

[Focus on writing a good-believable story]

- ❑ Choose two or three students to be in a group together. Now, suppose you are on a ship or in an airplane, and something [your group makes up the something] goes wrong. You wind up being stranded on a deserted island in the middle of \_\_\_\_\_.
- ❑ Conditions on the Island are: [come up with these]
- ❑ The only products that survived the crash were: [come up with these . . . 10 items maximum]
- ❑ Experience a major “trial” on the island and explain how everyone survived (or not).
- ❑ Explain how you were rescued, survived, or perished.
